

AI-POWERED WEIGHT MONITORING

WeightVerify is AICure's patent-pending AI platform that accurately verifies, tracks and analyzes weight data to improve patient engagement, clinical decision-making and long-term outcomes.

Pilot underway with Biohackr Health, a Bay Area-based clinic focused on metabolic health, longevity and weight optimization.

How WeightVerify Works

1. VERIFY

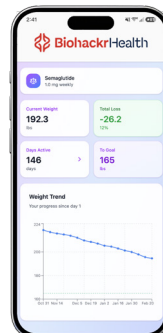

Patients use front facing camera to verify identity before weighing in.

2. CAPTURE

Rear facing camera captures weight reading from scale.

3. ANALYZE

Advanced analytics identify trends, adherence patterns and risk signals in real time.

4. ACT

Actionable insights are delivered to patients, providers and care teams to drive better decisions.

Built for Today's Most Important Health Programs

GLP-1 & Obesity Treatment Programs

Support healthcare providers and pharmaceutical companies with AI-powered weight monitoring that drives adherence, accountability and better outcomes.

Cardiac & Cardiometabolic Care Pathways

Monitor weight trends that impact cardiac health and support personalized care pathways for improved long-term outcomes.

Diabetes & Endocrine Management

Integrate accurate weight data to optimize diabetes and endocrine care and improve patient outcomes.
